

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (currently amended) An electronic apparatus comprising:
a game CPU which executes a game related process;
a phone CPU which executes a phone related process;
a play key to play a game;
an interruption key to initiate an interruption of ~~a said game;~~
a first key register to which a first predetermined value first information is set in
response to an operation of said play key and second information is set in response to an
operation of said interruption key;

wherein said game related process includes a game process to play said game
when said first information is set into said key register and an interruption process to
interrupt said game process when ~~a setting of said first register indicates said first~~
~~predetermined value~~ said second information is set into said key register; and

said phone related process includes a setting process to set said ~~first predetermined~~
~~value~~ second information into said ~~first~~ key register when an incoming phone call is
detected.

2. (currently amended) An electronic apparatus according to claim 1,
wherein said game related process further includes a storing process to store current game
data into a memory when ~~the setting of said first register indicates said first~~
~~predetermined value~~ said second information is set into said key register.

3. (currently amended) An electronic apparatus according to claim 1, wherein said phone related process further includes a determination process to determine whether said game process is in an activated state or not, and said setting process sets said ~~first predetermined value~~ second information into said ~~first~~ key register in response to a detection of said incoming phone call when a determination result of said determination process is affirmative.

4. (canceled)

5. (previously presented) An electronic apparatus according to claim 1, further comprising a display which displays a game screen, wherein said phone related process further includes a modifying process to modify a tone of said game screen in response to a detection of said incoming phone call.

6. (previously presented) An electronic apparatus according to claim 1, wherein said game related process is executed according to a game program downloaded from an outside source.

7.-14. (canceled)

15. (previously presented) An electronic apparatus according to claim 1, wherein said interruption process continues to pause said game process.

16.-26. (canceled)

27. (new) An electronic apparatus according to claim 1, wherein said interruption process interrupts said game process when said second information is set into said key register in a state of said game process being activated.

28. (new) An electronic apparatus according to claim 27, wherein said interruption key combines with a resume key to initiate a resumption of said game, and said game related process further includes a canceling process to cancel a setting of said second information in association with execution of said interruption process, and a resumption process to resume said game process when said second information is set into said key register in a state of said game process being interrupted.
